Technical Skills

Networking / Multiplayer

- Implemented a client/server architecture using Netcode and Mirror with dynamic authority distribution for Rigidbody interactions.

- Public servers/rooms list and lobby filling before the game.

Public player list with ability for host to kick/mute players.

Procedural World Generation & Streaming

- Built procedural world generation based on mixing perlin/voronoi noises for biome diversion and rare structures generations.

- World generation is gradual to spread the load on the hardware.

Made with hashmaps to store loading queue for chunks.

- The world contents are made using ScriptableObjects.

The changes in them are saved at runtime along with loading/unloading the chunks.

NPC Behaviour

- Created A* pathfinding algorithm in dynamic environment

from scratch and well performing at high agents densities.

- Implemented NPC logic (patrolling, hostile, following) using NavMesh.

- Decision making depends on surroundings and NPCs around.

Additional Skills

- Worked on smooth and responsive weapon wielding and recoil using sinusoids, lerps and other interpolation math functions.
- Also developed physically accurate bullet ballistics with continuous rigidbody for bullets traveling at high speed.
- A lot of experience with Debugging and code testing in personal projects.
- Experience working with UV maps, Lighting baking, Post processing
- Confident with Blender, Skeleton rigging (and export to Unity), model clean up, Model unwrapping/Texturizing.
- Updated the nav-map bake locally where the change on the map occurred (placing walls or moving furniture).
- Set up a map made using unity tilemap. Used ScriptableObject for some tiles to be a fridge, aid kit(container), stove, openable door etc.
- Had a problem of high load from instantiating bullets every time the player shoots, solved with object pulling.
- Made a limited vision for the top-down view player by culling out items and zombies out of the player's sight, the sight was made with raycasts and dynamically changing the shape of the culling mask.

About me

I'm an 19 year old student studying Computer Science. I have been making games on personal ambitions since i was 14y.o, eager to advance in game development art.
